

IN THE CLAIMS

Please cancel claims 7 and 12-14 without prejudice, amend claims 8 and 11, and add claims 15-22 as follows:

Claim 7 (Canceled)

1           8. (Currently Amended) ~~An antenna as claimed in claim 7,~~  
2 ~~comprising~~ A printed circuit board including a surface mounted  
3 device antenna with at least one resonant conductor track  
4 structure, the printed circuit board comprising a ground  
5 metallization configured to substantially surround the antenna, and  
6 to connect to one end of the conductor track structure,  
7       the antenna comprising:  
8       a first supply lead configured to connect one end of a first  
9 resonant track structure of the antenna to a ground potential;  
10       a second supply lead configured to couple an electromagnetic  
11 wave to be emitted into the antenna, which first track structure  
12 has a plurality of conductor sections, while the length of the  
13 conductor track structure is dimensioned so as to excite a desired  
14 first resonant frequency, and paths of the conductor sections and

15 spacings between the conductor sections are configured to excite a  
16 first harmonic of the first resonant frequency; and  
17 a second resonant track structure, one end of which is  
18 connected to the second supply lead and the length of which is  
19 configured dimensionally to excite at least one of a desired second  
20 resonant frequency and a harmonic of the second resonant frequency.

1 9. (Previously Presented) An antenna as claimed in claim 8,  
2 wherein the spacing between the first and second track structures  
3 is configured such that the resonant frequencies of the antenna are  
4 excited by a combined capacitive and resonant coupling of the  
5 electromagnetic wave to be emitted.

1 10. (Previously Presented) An antenna as claimed in claim 8,  
2 wherein the first track structure has conductor sections of  
3 different widths.

1 11. (Currently Amended) ~~An antenna as claimed in claim 7~~ A  
2 printed circuit board including a surface mounted device antenna  
3 with at least one resonant conductor track structure, the printed  
4 circuit board comprising a ground metallization configured to

5 substantially surround the antenna, and to connect to one end of  
6 the conductor track structure,  
7 the antenna comprising:  
8 a first supply lead configured to connect one end of a first  
9 resonant track structure of the antenna to a ground potential; and  
10 a second supply lead configured to couple an electromagnetic  
11 wave to be emitted into the antenna, which first track structure  
12 has a plurality of conductor sections, while the length of the  
13 conductor track structure is dimensioned so as to excite a desired  
14 first resonant frequency, and paths of the conductor sections and  
15 spacings between the conductor sections are configured to excite a  
16 first harmonic of the first resonant frequency, wherein at least  
17 one of the first and second track structure has conductor sections  
18 of different widths.

Claims 12-14 (Canceled)

1 15. (New) A telecommunications device with a printed circuit  
2 board as claimed in claim 8.

1           16. (Currently Amended) A telecommunications device with an  
2 antenna as claimed in claim 8.

1           17. (New) A telecommunications device with a printed circuit  
2 board as claimed in claim 11.

1           18. (Currently Amended) A telecommunications device with an  
2 antenna as claimed in claim 11.

1           19. (New) A printed circuit board comprising:  
2 a surface mounted antenna; and  
3 a ground metallization configured to substantially surround  
4 said antenna;  
5 wherein said antenna comprises:  
6 a first resonant structure having one end connected to said  
7 ground metallization, and another end connected to a supply lead  
8 configured to couple an electromagnetic wave to be emitted into the  
9 antenna; and  
10 a second resonant structure having an end connected to the  
11 supply lead;

12 wherein a length of said first resonant structure is  
13 configured dimensionally to excite a desired first resonant  
14 frequency; and

15 wherein a length of said second resonant structure is  
16 configured dimensionally to excite at least one of a desired second  
17 resonant frequency and a harmonic of the second resonant frequency.

1 20.(New) The printed circuit board of claim 19, wherein the  
2 first resonant structure includes conductor sections, and paths of  
3 said conductor sections and spacings between said conductor  
4 sections are configured to excite a first harmonic of said first  
5 resonant frequency.

1 21.(New) A telecommunications device with a printed circuit  
2 board as claimed in claim 19.

1 22.(New) A telecommunications device with an antenna as  
2 claimed in claim 19.
